

STOP MORE COUNTERFEIT CHECKS

SENTRY: Inspect™

Check washing and chemical alteration reportedly accounts for up to \$815 million in fraud annually across the country.*

TECHNOLOGY TRUMPS MANUAL REVIEW

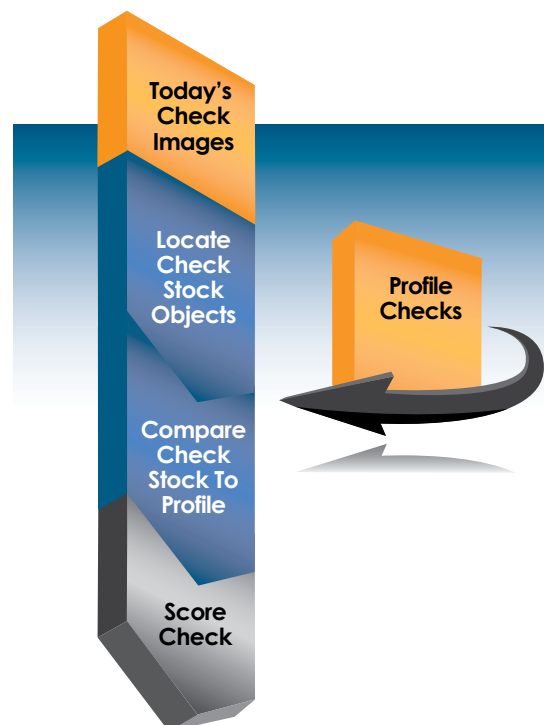

Counterfeit checks continue to be a source of concern for financial institutions across the nation, and manual review to detect forgeries or reproductions isn't always effective. With **SENTRY: Inspect™**, the guesswork is removed from the process thanks to innovative technology. Additionally, it's a far more efficient method compared to the manpower that might otherwise be needed.

The software in **SENTRY: Inspect** will review on-us check images, compare various details with profiles, detect counterfeit and altered on-us checks, and prompt personnel for further review.

Distinguishing minute alterations is difficult for the human eye, and fraudsters are very aware of this fact. By accessing customer profiles automatically, **SENTRY: Inspect** can make evaluations of authenticity quickly and successfully. It recognizes all fixed points on checks, such as:

- Payor name and address
- Memo and signature line placement
- Standard text
- Font and layout
- Serial number
- Check size

In addition, SENTRY: Inspect is so precise, it can effectively scan checks with scenic backgrounds.

SQN SENTRY: Inspect Features and Benefits

SENTRY: Inspect will find and stop more counterfeit checks. As a result, you can:

- Decrease losses
- Improve productivity
- Reduce workload of back-office operators
- Protect your customer base
