MOBILE SIGNATURE MANAGEMENT
SENTRY: SigTab™

EASILY COLLECT AND MANAGE CUSTOMER SIGNATURES

SQN Banking Systems proudly introduces **SENTRY: SigTab™**, an application that allows users to use an iPad or Android tablet to capture, store and retrieve signatures for any document that requires a signature image, including new account openings, mortgage applications, loan applications and more.

Once loaded onto your tablet, **SENTRY: SigTab** can:

- Gather signatures using either a stylus or a fingertip
- Capture signatures in the branch or at customer locations
- Collect multiple signatures under one account or on one document
- Send captured signatures to database immediately via web service, or store them on the tablet to be uploaded later
- Display and embed signatures into pdf documents
- Scan and store other documents as well, including photo IDs and passports

SENTRY: SigTab also allows users to find signatures by searching account data such as customer, bank number, application number and account number. The application easily interfaces into existing document management systems, and automatically creates an audit trail of all transactions.
