

The EasyScan™ scanner is a hand-held “point and click” device. An operator points the barrel toward a signature on a signature card and clicks the trigger, or presses a key. The image is instantly captured and displayed with **SENTRY: Signature**.

SENTRY: Signature™ Features and Benefits

- **Reduces Check Fraud** by quickly providing bank personnel with the information they need to help spot fraudulent checks.
- **Improves Customer Service:** By enabling bank tellers to verify a signature in seconds, **Signature** reduces the time that customers spend waiting in line, building customer loyalty and a competitive edge. In addition, you no longer need to waste time faxing signature cards. All signatures are available at all locations, allowing you to discreetly identify customers.
- **Increases Back Office Productivity:** Reduces operational costs by requiring fewer people to review substantially more exception items. **SENTRY: Batch Review™** allows you to verify over 1,000 checks per hour by displaying signatures together with your on-us check images on the same screen.
- **Saves Space:** Teller “real estate” is expensive. Eliminate the need for signature card files to be placed near the tellers or back office personnel, providing significant space savings.
- **Integrates with Existing Systems:** The flexibility of **Signature** allows it to be easily loaded to existing LANs running Windows NT™ and Novell Netware™ at banks of all sizes. Also, **Signature** is able to run within almost every popular teller, platform, and check processing application today, including SQN’s **SENTRY: Exception™**. Plus, SQN offers superior software to detect check and deposit fraud with **SENTRY: Detect™** and **SENTRY: Monitor™**.
- **Works with SENTRY: Sigcheck™** comparison engine to automatically verify the match between signatures on your on-us checks and reference signatures.
- **Conversion Services Available:** SQN will scan any number of signature cards or other documents, at your location or ours, index and extract the signatures and other desired information and return the files to you on your schedule.

The online signatures can be used for a wide variety of applications, such as signature verification, signature comparison, exception item processing, and batch file.

About SQN

SQN is the largest provider of Signature Verification and integrated Fraud Detection Software for the financial industry. Our **SENTRY** suite of products provides exception item processing, intelligent software that detects check and deposit fraud, signature comparison and display, safe deposit automation and much more, in both PC-based and host applications. SQN has over 500 customers and over 20 years of experience meeting the needs of financial institutions of all sizes.
