SQN: Safe Deposit™

Safe Deposit Management Software

Managing your safe deposit operations can be a daunting task. You must provide your customers with easy access to their safe deposit box, accurate bills and access logs, while preventing unauthorized people from breaching the security of your vault.

In response to this growing need, SQN designed **SQN: Safe Deposit** to provide complete automated billing and record keeping.

Why SQN: Safe Deposit?

SQN: Safe Deposit is a PC-based software application that manages your entire safe deposit operation. The database includes information unique to each authorized user, such as their signature, photograph and payment status. Your bank can display this information on a PC to determine whether to grant access to the safe deposit box and if the account is current.

How does it work?

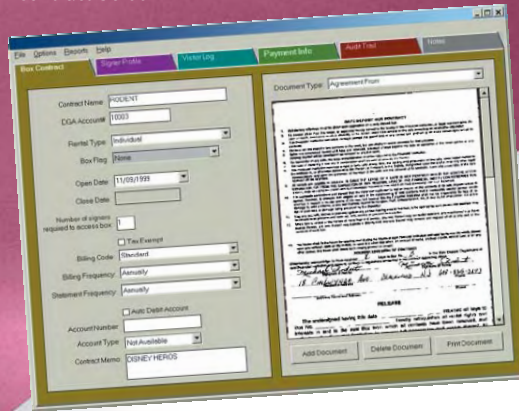

By displaying the signature of any box holder in seconds, **SQN: Safe Deposit** allows branch personnel to quickly and accurately verify a customer's identity. After entering the box number, only the bank employee sees the signature, photograph and account information. Your bank can discreetly verify the requester's identity, and prevent impostors from gaining access. You can also have your customer "sign-in" on a signature pad to further document the visit. (Signature pads and photo I.D. cameras are optional.)

"SQN: Safe Deposit has all of the features and reports that we wanted, including... box access logs, plus current and potential income."
